Page 1 of 23

Important Instructions to examiners:

- 1) The answers should be examined by key words and not as word-to-word as given in the model answer scheme.
- 2) The model answer and the answer written by candidate may vary but the examiner may try to assess the understanding level of the candidate.
- 3) The language errors such as grammatical, spelling errors should not be given more importance (Not applicable for subject English and Communication Skills).
- 4) While assessing figures, examiner may give credit for principal components indicated in the figure. The figures drawn by candidate and model answer may vary. The examiner may give credit for any equivalent figure drawn.
- 5) Credits may be given step wise for numerical problems. In some cases, the assumed constant values may vary and there may be some difference in the candidate's answers and model answer.
- 6) In case of some questions credit may be given by judgement on part of examiner of relevant answer based on candidate's understanding.
- 7) For programming language papers, credit may be given to any other program based on equivalent concept.

Inlet concentration C_0 is known (point L). To find C_1 , draw a line through C_0 having slope $\left(\frac{-1}{\tau_1}\right)$ until it cuts the rate curve (point M). From that point draw a perpendicular to x axis. The point where it touches the x axis is C_1 (point N). To find C_2 , draw a line through C_1 having slope $\left(\frac{-1}{\tau_2}\right)$ until it touches the rate curve (point P). Perpendicular drawn from that point gives C_2 . Repeat same the procedure to find C_3 . Knowing Concentration, conversion can be calculated using the relation $C_A = C_{A0}(1 - X_A)$ for constant volume system.

4 Attempt any THREE of the following

12

4 a

Given:

$X_A = 0.70$, $t = 13$ min

For constant volume batch reactor,

$$t = CA0 \int_0^{X_A} \frac{dX_A}{-r_A}$$

First order chemical reaction is taking place

$$-r_A = k.C_A = k.C_{A0} (1 - X_A)$$

WINTER-19 EXAMINATION
Model Answer

Subject title: Chemical Reaction Engineering

Subject code

22512

Page 15 of 23

For the PFRs connected in parallel, the whole system can be treated as a single plug flow reactor of volume equal to total volume of the individual units if the feed is distributed in such a manner that fluid stream which meet have the same composition. Thus for reactors in parallel, V/F or τ must be the same for each parallel line. Any other method of feeding is inefficient.

2

Ie $\left(\frac{V}{F}\right)$ for branch A = $\left(\frac{V}{F}\right)$ for branch B

$$\left(\frac{F_{01}}{F_{02}}\right) = \left(\frac{V_1}{V_2}\right)$$

For example:

If $V_1 = 80$ lit & $V_2 = 40$ lit

$$\left(\frac{F_{01}}{F_{02}}\right) = \left(\frac{V_1}{V_2}\right) = \frac{80}{40} = 2$$

$$F_{01} = 2F_{02}$$

$$\text{Total feed } F = F_{01} + F_{02} = 2F_{02} + F_{02} = 3 F_{02}$$

$$\text{Fraction of feed fed to branch A} = F_{01} / F = 2F_{02} / 3 F_{02} = 2/3$$

$$\text{Fraction of feed fed to branch B} = F_{02} / F = F_{02} / 3 F_{02} = 1/3$$

2

WINTER-19 EXAMINATION
Model Answer

Subject title: Chemical Reaction Engineering

Subject code

22512

Page 18 of 23

20	0.0556	2.22×10^{-3}
40	0.0385	1.5375×10^{-3}
100	0.02	8×10^{-4}
125	0.0167	6.664×10^{-4}

Since k values are not same, reaction is not of zero order

Assume reaction is of first order

For first order reaction $-\ln(C_A / C_{A0}) = kt$

$$k = -\ln(C_A / C_{A0}) / t$$

At $C_{A0} = 0.1$ and $C_A = 0.0714$ at $t = 10$ min.

$$k = \frac{1}{10} \ln \frac{0.1}{0.0714} = 0.0343 \text{ min}^{-1}$$

Time, min	Concentration, mol/l	k, min^{-1}
0	0.1	--
10	0.0714	0.0343
20	0.0556	0.0342
40	0.0385	0.0239
100	0.02	0.0161
125	0.0167	0.0143

Since k values are not same, reaction is not of first order

Assume reaction is of second order

For second order reaction:

$$k = \frac{1}{t} \left[\frac{1}{C_A} - \frac{1}{C_{A0}} \right]$$

For $C_A = 0.0556$ at $t = 20$ min

$$k = \frac{1}{20} \left[\frac{1}{0.0556} - \frac{1}{0.1} \right] = 0.399 (\text{l/mol}) \text{ min}^{-1}$$

Time, min	Concentration, mol/l	k, $(\text{l/mol}) \text{ min}^{-1}$

Model Answer

Subject title: Chemical Reaction Engineering

Subject code

22512

Page 22 of 23

$$\frac{V}{F_{A0}} = \frac{\tau}{C_{A0}} = \frac{X_A}{(-r_A)}$$

Where $X_A = 0.5$;

$$-r_A = k C_A^2$$

For constant volume reaction system

$$\frac{V}{F_{A0}} = \frac{X_A}{(-r_A)}$$

$$\frac{V}{F_{A0}} = \frac{0.5}{(k C_A^2)}$$

As $C_A = C_{A0}(1 - X_A)$, above equation can be written as

$$\frac{V}{F_{A0}} = \frac{0.5}{(k \cdot C_{A0}^2 (1 - X_A)^2)}$$

$$\frac{V}{F_{A0}} = \frac{0.5}{(k \cdot C_{A0}^2 (1 - 0.5)^2)}$$

$$\frac{V \cdot k \cdot C_{A0}^2}{F_{A0}} = \frac{0.5}{((1 - 0.5)^2)}$$

$$\frac{V \cdot k \cdot C_{A0}^2}{F_{A0}} = 2$$

For a plug flow reactor of same size ,design equation is

$$\frac{V}{F_{A0}} = \frac{\tau}{C_{A0}} = \int_0^{X_A} \frac{dX_A}{-r_A}$$

$$\frac{V}{F_{A0}} = \int_0^{X_A} \frac{dX_A}{-r_A}$$

$$\frac{V}{F_{A0}} = \int_0^{X_A} \frac{dX_A}{k \cdot C_{A0}^2 (1 - X_A)^2}$$
