Subject Code: 17102

Model Answer Basic Science (Physics)

Page No: 01/14

Que. No.	Sub. Que.	Stepwise Solution	Marks	Total Marks
		<p>Important Instructions to examiners:</p> <ol style="list-style-type: none">1) The answers should be examined by key words and not as word-to-word as given in the model answer scheme.2) The model answer and the answer written by candidate may vary but the examiner may try to assess the understanding level of the candidate.3) The language errors such as grammatical, spelling errors should not be given more Importance (Not applicable for subject English and Communication Skills).4) While assessing figures, examiner may give credit for principal components indicated in the figure. The figures drawn by candidate and model answer may vary. The examiner may give credit for any equivalent figure drawn.5) Credits may be given step wise for numerical problems. In some cases, the assumed constant values may vary and there may be some difference in the candidate's answers and model answer.6) In case of some questions credit may be given by judgment on part of examiner of relevant answer based on candidate's understanding.7) For programming language papers, credit may be given to any other program based on equivalent concept.

1)		Attempt any NINE of the following:		18
	a)	Define compressibility. State its SI unit. Definition Unit Compressibility: The reciprocal of bulk modulus of elasticity is called as compressibility. OR The property on account of which the body can be compressed by the application of external force is called compressibility. S.I. Unit:- m^2/N	1 1	2
	b)	State any two factors affecting elasticity. Any two factors Factors affecting on elasticity: 1) Change of temperature. 2) Effect of hammering & rolling. 3) Effect of annealing. 4) Effect of impurities. 5) Effect of recurring stress.	2	2
	c)	State Archimedes Principle. Archimedes Principle- It states that when a solid insoluble body is immersed completely or partly in a liquid, it loses its weight and loss of weight of the body is equal to the weight of displaced liquid.	2	2
	d)	State the effect of temperature and adulteration on viscosity of liquid. Each effect Temperature: The viscosity of liquid is inversely proportional to the temperature of the liquid. Adulteration: When adulteration of soluble substance is added to the liquid its viscosity goes on increasing.	1	2

1)	e)	Define capillarity. State two examples of capillary action. Definition Two examples Capillarity: - The rise or fall of a liquid inside the capillary is called as capillarity. Examples (1) Oil rises up to the end of wick of lamp due to capillarity. (2) The water and minerals sucked by roots reaches upto leaves of tree or plant due to capillarity. (3) A blotting paper absorbs ink due to capillarity. (4) Rise of ink through pen nib.	1 1	2
	f)	State the relation between $^{\circ}\text{C}$, $^{\circ}\text{F}$ and $^{\circ}\text{K}$. Relation $C = \frac{F - 32}{1.8} = K - 273$	2	2
	g)	A 100 ml of air is measured at 20°C. If the temperature of air is raised to 50°C, calculate its volume as pressure remains constant. Formula Answer with unit Given $\begin{array}{ll} V_1 = 100 \text{ ml} & V_2 = ? \\ t_1 = 20^{\circ}\text{C} & t_2 = 50^{\circ}\text{C} \\ T_1 = 20 + 273 & T_2 = 50 + 273 \\ = 293^{\circ}\text{K} & = 323^{\circ}\text{K} \end{array}$ $\frac{V_1}{T_1} = \frac{V_2}{T_2}$ $V_2 = \frac{V_1 \times T_2}{T_1}$ $V_2 = \frac{100 \times 323}{293}$ $V_2 = 110.24 \text{ ml}$	1 1	2

1)	h)	Define specific heats of a substance. State its SI unit. Definition Unit Specific heat of a substance:- Specific heat of a substance is defined as the amount of heat required to increase the temperature of unit mass of a substance by one degree. SI Unit:- J/kg °K	1 1	2
	i)	A radio wave of frequency 91.1 MHz travels with speed of 3×10^8 m/s. Find its wavelength. Formula Answer with unit Given $v = 3 \times 10^8$ m/s $n = 91.1 \text{ MHz} = 91.1 \times 10^3 \text{ Hz}$ $v = n \lambda$ $\lambda = v / n = 3 \times 10^8 / 91.1 \times 10^3$ $\lambda = 0.0329 \times 10^5 \text{ m.}$	1 1	2
	j)	Define simple harmonic motion. Give its one example. Definition One example Definition: It is defined as the periodic motion of a body in which the force (or acceleration) is always directed towards mean position and its magnitude is proportional to its displacement from mean position. Examples : Motion of pendulum. Motion of needle sewing machine. Motion of swing. etc.	1 1	2

2	e)	<p>Explain Laplace's molecular theory of surface tension of liquid.</p> <p>Diagram</p> <p>Explanation</p> <p>Laplace's molecular theory of surface tension</p> <ol style="list-style-type: none"> 1. Consider three molecules A, B & C of the liquid. A sphere of influence is drawn as shown in fig. 2. The sphere of influence of molecule 'A' is completely inside the liquid, so it is equally attracted in all directions by the other molecules lying within its sphere. Hence the resultant force acting on it is zero. 3. The part of the sphere of influence of molecule 'B' lies outside the liquid & the major part lie inside the liquid. Therefore resultant force acting on it is directed downward. 4. For Molecule 'C' half of its sphere of influence lies inside the liquid and half lies outside the liquid. So, the maximum resultant downward force is acting on molecule 'C' <div data-bbox="443 1160 1061 1556" data-label="Diagram"> </div> <p>Fig: Laplace molecular theory</p> <ol style="list-style-type: none"> 5. Thus molecule A experiences zero resultant force, B experience downward resultant force, C experience more downward resultant force. In short molecules below imaginary line PQ experience zero resultant force and molecules about line PQ experience some or more downward resultant force 	<p>1½</p> <p>2½</p>	4
