## 22607

22232
4 Hours / 70 Marks
Seat No.

Instructions :
(1) All Questions are compulsory.
(2) Answer each next main Question on a new page.
(3) Illustrate your answers with neat sketches wherever necessary.
(4) Figures to the right indicate full marks.
(5) Assume suitable data, if necessary.
(6) Use of Non-programmable Electronic Pocket Calculator is permissible.
(7) Mobile Phone, Pager and any other Electronic Communication devices are not permissible in Examination Hall.

1. Attempt any FIVE of the following :
(a) State the criterias to decide design strength of tension member. State the formula for any one.
(b) State maximum values of slenderness ratio for any two conditions of compression member.
(c) State any two conditions where in doubly reinforced section is to be used.
(d) State the expression for effective width of flange for Tee beam and L beam with meaning of each term.
(e) State the expression to calculate self-weight of waist slab in staircase.
(f) Draw sketch of part of folded plate stair flight showing rise, tread and main steel.
(g) Write I.S. specifications for
(i) Minimum and maximum $\%$ of compression steel in column
(ii) Minimum no. \& diameter of bars
2. Attempt any THREE of the following :

## 12

(a) A tension member consists of 2 ISA $90 \times 90 \times 8 \mathrm{~mm}$ connected back to back same side of 10 mm thick gusset plate. Calculate its net area if 20 mm diameter bolts are used for connection.
(b) Determine the moment of resistance of a T-beam having (i) bf $=1500 \mathrm{~mm}$ (ii) $\mathrm{Df}=150 \mathrm{~mm}$ (iii) effective depth of beam $\mathrm{d}=640 \mathrm{~mm}$ (iv) width of web bw $=300 \mathrm{~mm}$ (v) reinforcement $8-20 \mathrm{~mm}$ dia. bars. (vi) M20 grade of concrete and Fe 415 steel.
(c) Calculate the safe load carrying capacity of a column of diameter 500 mm reinforced with 6 bars of 20 mm dia. M20 concrete and Fe415 steel are used. Check the column for minimum eccentricity if effective length 4.50 m .
(d) Determine the area of longitudinal steel for short circular column of diameter of 450 mm with length 5.0 m which is held in position at both ends but not restrained against rotation. Column has to carry a factored load of 1500 kN . Use M20 concrete and Fe500 steel.
3. Attempt any TWO of the following :
(a) An inclined truss member consists of 2 ISA $100 \times 75 \times 10 \mathrm{~mm}$ connected back to back (with longer leg) to gusset plate of 12 mm thick. 20 mm dia. 3 bolts of grade 4.6 are used in one row for connection with 70 mm pitch and 40 mm edge distance. Calculate the design tensile strength of member considering block shear only.
(b) Design a tie member using single unequal angle section to carry a tensile load of 340 kN . Assume single row of 20 mm bolted connection. The length of member is 2.4 M . Take $\mathrm{f}_{\mathrm{u}}=410 \mathrm{MPa}, \alpha=0.80, \mathrm{f}_{\mathrm{y}}=250 \mathrm{MPa}$. (Check for block shear not expected).

| Section Available | Area in $\mathbf{m m}^{\mathbf{2}} \mathbf{( A}_{\mathbf{g}} \mathbf{)}$ |
| :---: | :---: |
| ISA $100 \times 75 \times 8$ | 1336 |
| ISA $125 \times 75 \times 8$ | 1538 |
| ISA $150 \times 75 \times 8$ | 1748 |

(c) A single angle discontinuous strut ISA $70 \times 70 \times 6 \mathrm{~mm}$ of a roof truss is 1.2 m long. It is connected by two bolts at each end. Determine the design load this strut can carry.

| $\mathbf{K L} / \gamma$ | 40 | 50 | 60 | 70 | 80 | 90 | 100 | 110 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{f c d} \mathbf{M P a}$ | 198 | 183 | 168 | 152 | 136 | 121 | 107 | 94.6 |

for given angle $A_{g}=806 \mathrm{~mm}^{2} \mathrm{r}_{\mathrm{vv}}=13.5 \mathrm{~mm}$.

## 4. Attempt any TWO of the following :

(a) A discontinuous compression member consists of 2 ISA $90 \times 90 \times 10 \mathrm{~mm}$ connected back to back on opposite sides of 12 mm thick gusset plate. Taking rivets are provided along the length along with one bolt at each end. Determine the design strength of the member. The center to center distance of connections is 3 m .

For single ISA $90 \times 90 \times 10 \mathrm{~mm}, \mathrm{~A}=1703 \mathrm{~mm}^{2}, \mathrm{f}_{x}=27.3 \mathrm{~mm}, \mathrm{C}_{x}=\mathrm{C}_{\mathrm{y}}=25.9$ $\mathrm{mm}, \mathrm{I}_{x}=\mathrm{I}_{\mathrm{y}}=12.67 \times 10^{5} \mathrm{~mm}^{4}$.

| $\mathbf{K L} / \gamma$ | 80 | 90 | 100 | 110 | 120 | 130 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{f c d}(\mathbf{M P a})$ | 136 | 121 | 107 | 94.6 | 83.7 | 74.4 |

(b) Design double angle section back to back on each side of gusset plate of 8 mm thick for the continuous principal rafter of a truss to carry factored load of 250 kN . Center to center length of member between centroids of connection is 2.5 m .

| Angle Section (mm) | ${ }^{\prime} \mathbf{A}^{\prime} \mathbf{m m}^{\mathbf{2}}$ | $\mathbf{f}_{\mathbf{y y}}(\mathbf{m m})$ | $\mathbf{I}_{\boldsymbol{x x}}=\mathbf{I}_{\mathbf{y y}}$ | $\mathbf{C}_{\boldsymbol{x} \boldsymbol{x}}=\mathbf{C}_{\mathrm{yy}}$ |
| :---: | :---: | :---: | ---: | :---: |
| ISA 70 $\times 70 \times 8$ | 1058 | 21.0 | $47.4 \times 10^{4}$ | 20.2 |
| ISA $75 \times 75 \times 8$ | 1138 | 22.8 | $59.0 \times 10^{4}$ | 21.4 |
| ISA $80 \times 80 \times 8$ | 1221 | 24.4 | $72.5 \times 10^{4}$ | 22.7 |

(c) A doubly reinforced section $230 \times 500 \mathrm{~mm}$ deep to the center of $4-16 \mathrm{~mm}$ dia. tension reinforcement. It is also reinforced with 4-12 mm bars in compression zone. Determine the ultimate moment of resistance of the section considering M20 grade of concrete $\mathrm{d}^{\prime} / \mathrm{d}$ as 0.10 with stress in compression steel as $353 \mathrm{~N} / \mathrm{mm}^{2}$ (for $\mathrm{f}_{\mathrm{y}} 415$ steel).
5. Attempt any TWO of the following :
(a) A RCC beam $250 \times 550 \mathrm{~mm}$ carries a factored moment of 248.5 kNm . Find the steel required for the beam if M20 concrete and Fe415 steel is used. Assume effective cover to reinforcement as 50 mm .

| $\mathbf{d}^{\prime} / \mathbf{d}$ | 0.05 | 0.10 | 0.15 | 0.20 |
| :--- | :--- | :--- | :--- | :--- |
| fsc in MPa | 355 | 353 | 342 | 329 |

(b) A rectangular RC section is $200 \mathrm{~mm} \times 600 \mathrm{~mm}$ overall depth and is reinforced with 2-20 mm dia. bars in compression. If the concrete is M20 and steel is Fe500, determine the area of the tension steel needed to make the fully effective. Take effective cover to reinforcement as 50 mm . Take $\mathrm{f}_{\mathrm{sc}}$ as $410 \mathrm{~N} / \mathrm{mm}^{2}$.
(c) Determine the area of tensile reinforcement for a singly reinforced flanged beam having following data :
(i) Clear span -6.5 m
(ii) Overall depth of beam - 500 mm
(iii) $\mathrm{c} / \mathrm{c}$ spacing of T-beam ribs is 2.75 m
(iv) Live load on slab is $4 \mathrm{kN} / \mathrm{m}^{2}$
(v) Slab thickness is 100 mm
(vi) Concrete M20
(vii) Steel Fe415
(viii) Assume eff. cover to steel as 40 mm .
6. Attempt any TWO of the following :
(a) A hall measuring $30 \mathrm{~m} \times 8 \mathrm{~m}$ provided with floor consisting of slab and beam cast monolithically. T-beam has following details :
(i) Effective span $=8 \mathrm{~m}$
(ii) Slab thickness $=120 \mathrm{~mm}$
(iii) Effective depth $=600 \mathrm{~mm}$
(iv) Width of Ribs $=300 \mathrm{~mm}$
(v) Reinforcement on tension side $8-20 \mathrm{~mm}$ dia.
(vi) Materials are M20 \& Fe415

Determine the design u.d. load the beam can carry.
(b) Design a flight of a dog-legged staircase for the following data :
(i) No. of risers per flight $=10$
(ii) Rise $=150 \mathrm{~mm}$
(iii) Trade $=300 \mathrm{~mm}$
(iv) Landing width $=1000 \mathrm{~mm}$
(v) Assume landing spanning along the flight
(vi) Live load on staircase is $3 \mathrm{kN} / \mathrm{m}^{2}$

Use M20 \& Fe415 materials.
(c) Design an RC column footing for uniform depth with the following data :
(i) Size of column $-450 \mathrm{~mm} \times 450 \mathrm{~mm}$
(ii) $\mathrm{SBC}=180 \mathrm{kN} / \mathrm{m}^{2}$
(iii) Load on column $=1500 \mathrm{kN}$
(iv) Materials are M20 \& Fe415
(v) Depth of footing is for BM criteria \& one way shear only.

Clause 10.3.3 $\quad V_{n s b}=(f u / \sqrt{ } 3)\left(n_{D} A_{n b}+n_{s} A_{s b}\right) \quad V_{d s b}=V_{n s b} / \gamma_{m b}$
Clause 10.3.4 $\quad V_{n p b}=2.5 k_{b} d t f_{u} \quad V_{d p b}=V_{n p b} / \gamma_{m b}$
$k_{b}$ is smaller of $e / 3 d_{o},\left[\left(p / 3 d_{o}\right)-0.25\right], f_{u b} / f_{w} 1.0$
Clause 6.2 $\quad T_{d g}=\frac{A_{g} f_{y}}{\gamma_{m 0}}$
Clause 6.3.3 $\quad T_{d n}=\frac{0.9 A_{n c} f_{u}}{\gamma_{m i}}+\beta \frac{A_{\mathrm{go}} f_{y}}{\gamma_{m 0}} \quad \beta=1.4-0.076(\mathrm{w} / t)\left(f_{y} / f_{u}\right)\left(t_{s} / L_{c}\right) \quad \leq\left(f_{u} \gamma_{m o v} / f_{y} \gamma_{m l}\right)$ $\geq 0.7$

$$
T_{d n}=\frac{\alpha A_{n} f_{u}}{\gamma_{m 1}}
$$

Clause 6.4.1 $T_{d b 1}=\frac{A_{v g} f_{y}}{\sqrt{3} \gamma_{m 0}}+\frac{0.9 A_{m} f_{u}}{\gamma_{m \mathrm{l}}} \quad T_{d b 2}=\frac{0.9 A_{n} f_{u}}{\sqrt{3} \gamma_{m 1}}+\frac{A_{g} f_{y}}{\gamma_{n 0}}$

Clause 7.1.2.1 $\quad f_{c d}=\chi \frac{f_{y}}{\gamma_{m 0}} \quad \chi=\frac{1}{\phi+\sqrt{\phi^{2}-\lambda_{e}^{2}}} \quad \phi=0.5\left[1+\alpha\left(\lambda_{e}-0.2\right)+\lambda_{e}^{2}\right]$
Clause 7.5.1.2. $\quad \lambda_{e}=\sqrt{k_{1}+k_{2} \lambda_{w}^{2}+k 3 \lambda_{\varphi}^{2}}$

$$
\lambda_{w v}=\frac{\left(\frac{l}{r_{w v}}\right)}{\varepsilon \sqrt{\frac{\pi^{2} E}{250}}} \text { and } \lambda_{\varphi}=\frac{\left(\underline{b}_{1}+b_{2}\right) / 2 t}{\varepsilon \sqrt{\frac{\pi^{2} E}{250}}}
$$
