

SUMMER – 2022 EXAMINATION

Subject Name: DSR

Model Answer

Subject Code: 22502

Important Instructions to examiners:

- 1) The answers should be examined by key words and not as word-to-word as given in the model answer scheme.
- 2) The model answer and the answer written by candidate may vary but the examiner may try to assess the understanding level of the candidate.
- 3) The language errors such as grammatical, spelling errors should not be given more Importance (Not applicable for subject English and Communication Skills).
- 4) While assessing figures, examiner may give credit for principal components indicated in the figure. The figures drawn by candidate and model answer may vary. The examiner may give credit for any equivalent figure drawn.
- 5) Credits may be given step wise for numerical problems. In some cases, the assumed constant values may vary and there may be some difference in the candidate's answers and model answer.
- 6) In case of some questions credit may be given by judgement on part of examiner of relevant answer based on candidate's understanding.
- 7) For programming language papers, credit may be given to any other program based on equivalent concept.
- 8) As per the policy decision of Maharashtra State Government, teaching in English/Marathi and Bilingual (English + Marathi) medium is introduced at first year of AICTE diploma Programme from academic year 2021-2022. Hence if the students in first year (first and second semesters) write answers in Marathi or bilingual language (English +Marathi), the Examiner shall consider the same and assess the answer based on matching of concepts with model answer.

Q. No.	Sub Q. N.	Answer	Marking Scheme
1.	a) Ans.	<p>Attempt any <u>FIVE</u> of the following:</p> <p>Enlist four steel structures with their functions.</p> <ol style="list-style-type: none">1. Steel tower<ol style="list-style-type: none">a) Lightning tower: It is used to prevent or to reduce lightning strike damage to the structureb) Transmission tower: It is used to support high tension cable.2. Roof trusses A roof truss is used to support purlins and roof over it. It is used in industries for large span working space.3. Steel water tank Steel tank are used to store of water, oil or any other liquids and gases Different in shapes like rectangular, circular or spherical4. Steel bridges Steel bridges are generally used in railways to cross highways, rivers and valley etc.5. Crane girders Crane girders are used in large scale industries to lift and move heavy materials and machinery6. Steel chimney Steel chimney are used for emission of flue gases higher in the atmosphere and reduce pollution.7. Building frames The building frames is three-dimensional skeleton system it consists of slabs, beams, columns and foundation connected with each other to act as one unit	<p>10 MARKS</p> <p>ANY FOUR ½ MARKS EACH</p>

b)	Define partial safety factor and state it's type.	1									
Ans.	The load factor and material factored are contribute partially to safety so they are called as partial safety factors.	Marks									
	Two types of partial safety factor are:	1/2									
	<ol style="list-style-type: none"> 1. Partial safety factor for load 2. Partial safety factor for material strength 	MARKS EACH									
c)	Write two advantages and two disadvantages bolted connection over welded connection.										
Ans.	Advantages of bolted connection over welded connection	ANY									
	<ol style="list-style-type: none"> 1. Making Joints is noiseless 2. Their no risk of fire in case of bolted connection. 3. Connections can be made quickly 4. Needs less Labour. 5. Do not need skilled labour. 6. Alterations, if any, can be done easily. 7. Working area required in the field is less. 	TWO 1/2 MARKS EACH									
	Disadvantages of bolted connection over welded connection	ANY									
	<ol style="list-style-type: none"> 1. Cost of material is high 2. Due to vibration bolts are likes to loose 3. Tensile strength is reduce considerably due to bolt holes 4. Overall weight of structure is increased due to weight of bolts 5. Bolted connection are not suitable gas or fluid retaining structure. 6. Lot of noise is produced in bolting process 	TWO 1/2 MARKS EACH									
d)	Write expression for minimum and maximum reinforcement in beam.										
Ans.	Minimum Tension reinforcement in beam:	1 M									
	$A_{st \text{ min}} = \frac{0.85 b d}{F_y}$	1 M									
	Maximum Tension or Compression reinforcement in beam:										
	$A_{st \text{ max}} < 0.04\% \text{ gross area or } 0.04 b D$										
e)	State two uses of bent up bar.										
Ans.	<ol style="list-style-type: none"> 1) Bent up bar are provided to complement the vertical stirrups in resisting shear 2) Bent up bars are good in controlling cracks width which may be developed due to diagonal tension 3) No additional steel is required, because only unwanted tension bar are used by bending these bars. Hence it provides economy 4) In most cases half of the total shear reinforcement in contributed by bent up bar 	Any Two 1 M Each									
f)	Differentiate between one way slab and two way slab with respect to spanning direction and bending curvature.										
Ans.	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 15%;"></th> <th style="width: 40%;">One way slab</th> <th style="width: 45%;">Two way slab</th> </tr> </thead> <tbody> <tr> <td>Spanning direction</td> <td>Main reinforcement is required in such slabs in one direction</td> <td>Main reinforcement is required in such slabs in two direction</td> </tr> <tr> <td>Bending curvature</td> <td>It is supported on two opposite edges hence bends in one direction</td> <td>It is supported on all four edges hence bends in on both direction</td> </tr> </tbody> </table>		One way slab	Two way slab	Spanning direction	Main reinforcement is required in such slabs in one direction	Main reinforcement is required in such slabs in two direction	Bending curvature	It is supported on two opposite edges hence bends in one direction	It is supported on all four edges hence bends in on both direction	1 M
	One way slab	Two way slab									
Spanning direction	Main reinforcement is required in such slabs in one direction	Main reinforcement is required in such slabs in two direction									
Bending curvature	It is supported on two opposite edges hence bends in one direction	It is supported on all four edges hence bends in on both direction									
		1 M									

2.		<p>g) Define effective length and slenderness ratio in column.</p> <p>Effective length: The effective length of the column is the length between the point of contra flexure of the buckled column.</p> <p>Slenderness ratio for column: The slenderness ratio for column is the ratio of effective (L_e) to the lateral dimension of column (L_d). Slenderness ratio = Effective length/ Lateral dimension</p> <p>Attempt any THREE of the following:</p> <p>a) Write four advantages and disadvantages of steel as construction material.</p> <p>Advantages of steel as construction material</p> <ol style="list-style-type: none"> 1) Steel has good mechanical properties like malleability and ductility with high strength 2) Steel structure are highly suitable for prefabrication and mass production 3) It has high scrap value 4) It can erected quite rapidly 5) Suitable for gas resistance structures 6) It is very useful for large span bridges, tall structures. Etc. 7) It can easily fabricated to any desired shape and size 8) It has high ratio of strength to weight which makes it to resist high load over a small cross section <p>Disadvantages of steel as construction material</p> <ol style="list-style-type: none"> 1) Steel is very costlier material. 2) It has affinity of corrosion and hence required corrosion treatment periodically. 3) It requires skill labour for erection 4) It creates noise and requires electricity during connection of members. 5) In steel construction it should not be monolithic construction <p>b) Differentiate between under-reinforced and over-reinforced section w.r. to percentage of steel provided, position of N.A., moment of resistance and failure of member.</p>	<p>1 M</p> <p>1 M</p> <p>12 MARKS</p> <p>ANY FOUR 1/2 MARKS EACH</p> <p>ANY FOUR 1/2 MARKS EACH</p>															
	Ans.	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 30%;"></th> <th style="width: 35%; text-align: center;">Under-reinforced section</th> <th style="width: 35%; text-align: center;">Over-reinforced section</th> </tr> </thead> <tbody> <tr> <td>Percentage of steel provided</td> <td>The percentage of steel is less than the balanced section</td> <td>The percentage of steel is more than the balanced section</td> </tr> <tr> <td>Position of N.A</td> <td>The actual neutral axis lies above the critical neutral axis $X_u < X_{u \max}$</td> <td>The actual neutral axis lies below the critical neutral axis $X_u > X_{u \max}$</td> </tr> <tr> <td>moment of resistance</td> <td>The moment of resistance is less than balanced section.</td> <td>The moment of resistance over-reinforcement beam bends under bending moment, resulting in small curvature.</td> </tr> <tr> <td>Failure of member.</td> <td>Under-reinforced section is ductile failure</td> <td>Over-reinforced section is sudden failure</td> </tr> </tbody> </table>		Under-reinforced section	Over-reinforced section	Percentage of steel provided	The percentage of steel is less than the balanced section	The percentage of steel is more than the balanced section	Position of N.A	The actual neutral axis lies above the critical neutral axis $X_u < X_{u \max}$	The actual neutral axis lies below the critical neutral axis $X_u > X_{u \max}$	moment of resistance	The moment of resistance is less than balanced section.	The moment of resistance over-reinforcement beam bends under bending moment, resulting in small curvature.	Failure of member.	Under-reinforced section is ductile failure	Over-reinforced section is sudden failure	<p>1 M</p> <p>1 M</p> <p>1 M</p> <p>1 M</p>
	Under-reinforced section	Over-reinforced section																
Percentage of steel provided	The percentage of steel is less than the balanced section	The percentage of steel is more than the balanced section																
Position of N.A	The actual neutral axis lies above the critical neutral axis $X_u < X_{u \max}$	The actual neutral axis lies below the critical neutral axis $X_u > X_{u \max}$																
moment of resistance	The moment of resistance is less than balanced section.	The moment of resistance over-reinforcement beam bends under bending moment, resulting in small curvature.																
Failure of member.	Under-reinforced section is ductile failure	Over-reinforced section is sudden failure																

c) **State reason for providing shear reinforcement in the beam state its two forms with neat figure.**

Ans. The reasons for providing shear reinforcement in the beam are as follows:

1. To prevent failure in shear.
2. To increase beam ductility.
3. Sudden failure will be reduce.

Shear reinforcement in the beam can be provided in any one of the forms given below:

1. Vertical stirrups

2. Inclined stirrups

Inclined stirrups.

3. Bent up bars with stirrups

Bent up bars alongwith stirrups.

d) **Calculate the development length, if 20mm diameter bar of grade Fe 415 is used for resisting compression, take $\tau_{bd} = 1.2 \text{ N/mm}^2$ for plain bar in tension.**

Given :

- i. bar diameter $d = 20\text{mm}$
- ii. Yield stress $f_y = 415\text{N/mm}^2$
- iii. Design bond stress $\tau_{bd} = 1.2\text{N/mm}^2$

$$\text{Development Length for compression steel} = \frac{0.87 f_y \phi}{4 \tau_{bd}}$$

For deformed bars, $\tau_{bd} = 1.2 \times 1.6 \times 1.25 = 2.4 \text{ Mpa}$ in compression

$$L_d = \frac{0.87 f_y \phi}{4 \tau_{bd}} = \frac{0.87 \times 415 \times 20}{4 \times 2.4}$$

$$L_d = 752.1875 \text{ mm}$$

1/2 M

1 M

1 M

1/2 M

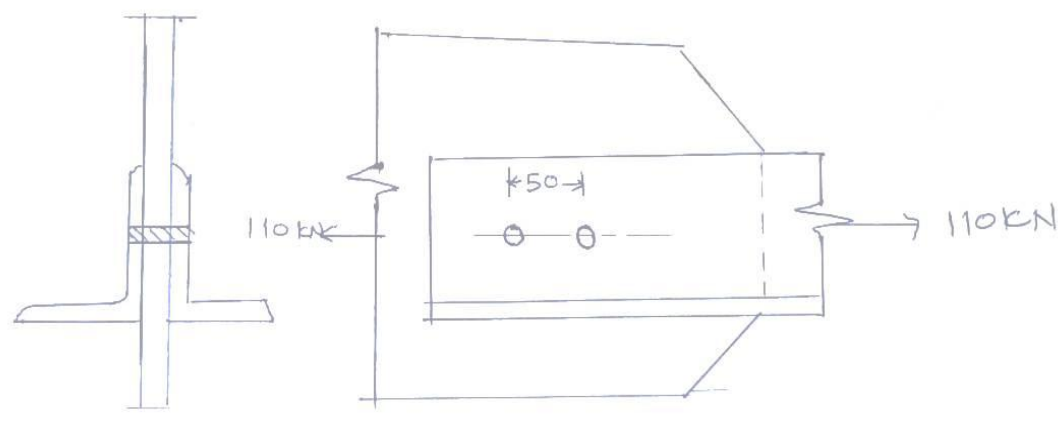

Q. 3	Attempt any TWO of the following	Marks
a)	<p>Determine bolt value of 16mm diameter bolt of 4.6 grade to connect two angles 90 × 60 × 6mm back to back on opposite side of gusset plate of 8 mm thickness. Also determine number of bolts required if it carries a direct factored load of 110 kN. Take pitch = 50 mm and edge distance = 40 mm. Draw neat sketch of designed connection.</p>	6 M
Ans.	<p>STEP 1) Given Data:</p> <p>i) Diameter of bolt $d = 16 \text{ mm}$</p> <p>ii) Diameter of bolt $d_0 = 18 \text{ mm}$</p> <p>iii) Class of bolt = 4.6 grade</p> <p>which means i.e. & $f_{ub} = 4 \times 100 = 400 \text{ N/mm}^2$ &</p> <p style="text-align: center;">$f_{yb} = 400 \times 0.6 = 240 \text{ N/mm}^2$</p> <p>iv) Two angles 90 x 60 x 6 mm are connected back to back to gusset plate of 8 mm thick</p> <p>Thickness will be minimum of angle ($6 \times 2 = 12 \text{ mm}$) and gusset plate (8 mm),</p> <p>Hence $t = 8 \text{ mm}$</p> <p>v) Factored load $P_u = 110 \text{ kN} = 110 \times 10^3 \text{ N}$</p> <p>vi) Pitch; $p = 50 \text{ mm}$</p> <p>vii) Edge distance; $e = 40 \text{ mm}$</p> <p>STEP 2) To find;</p> <p>i) Bolt Value</p> <p>ii) Number of Bolts</p> <p>STEP 3) Calculate design shearing strength of bolt (V_{dsb})</p> $V_{dsb} = \frac{V_{nsb}}{\gamma_{mb}}$ $V_{nsb} = \frac{f_{ub}}{\sqrt{3}} [n_n * A_{nb} + n_s * A_{sb}]$ <p>As two angles placed back to back there will be double shear, hence assuming the shear plane is intercepting at threaded portion only,</p> <p>Therefore, $n_n = 2$ & $n_s = 0$</p> $A_{sb} = \frac{\pi}{4} d^2$ $A_{sb} = \frac{\pi}{4} 16^2$ $A_{sb} = 201.06 \text{ mm}^2$ $A_{nb} = 0.78 * A_{sb}$	1/2 M
		1/2 M
		1/2 M

	$A_{nb} = 0.78 \times 201.06$ $A_{nb} = 156.83 \text{ mm}^2$ $V_{nsb} = \frac{410}{\sqrt{3}} [2 * 156.83 + 0]$ $V_{nsb} = 74246.79 \text{ N}$ $V_{nsb} = 74.25 \text{ kN}$ $V_{dsb} = \frac{74.25}{1.25}$ $V_{dsb} = 59.40 \text{ kN}$ <p>STEP 4) Calculate design bearing strength of bolt (V_{dpb})</p> $V_{dpb} = \frac{V_{npb}}{\gamma_{mb}}$ $V_{npb} = 2.5 \times k_b \times d \times t \times f_u$ <p>Where k_b is the minimum of the following;</p> <p>k_b is the minimum of the following;</p> <p>i) $K_{b1} = \frac{e}{3d_0} = \frac{40}{3 * 18} = 0.741$</p> <p>ii) $K_{b2} = \frac{f_{ub}}{f_u} = \frac{400}{410} = 0.97$</p> <p>iii) $K_{b3} = 1$</p> <p>iv) $K_{b4} = \frac{p}{3 * d_0} - 0.25 = \frac{50}{3 * 18} - 0.25 = 0.67$</p> <p>Therefore, $K_b = 0.67$</p> $V_{npb} = 2.5 * 0.67 * 16 * 8 * 410$ $V_{npb} = 87904 \text{ N}$ $V_{npb} = 87.90 \text{ kN}$ <p>Now,</p> $V_{dpb} = \frac{87.90}{1.25}$ $V_{dpb} = 70.32 \text{ kN}$ <p>STEP 5) Decide bolt value</p> <p>Bolt value is a minimum between design shearing and bearing strength of bolt. Minimum between $V_{dsb} = 59.40 \text{ kN}$ & $V_{dpb} = 70.32 \text{ kN}$</p> <p>Therefore, $B_v = 59.40 \text{ kN}$</p> <p>STEP 6) Calculate Number of bolts required (n)</p> $\text{No. of Bolts (n)} = \frac{\text{Design load (P}_u\text{)}}{\text{Bolt Value (B}_v\text{)}}$	<p>1/2 M</p> <p>1/2 M</p> <p>1/2 M</p> <p>1/2 M</p> <p>1/2 M</p> <p>1/2 M</p> <p>1/2 M</p>
--	---	--

		<p>No. of Bolts (n) = $\frac{110}{59.40}$</p> <p>No. of Bolts (n) = 1.85</p> <p>No. of Bolts (n) \cong 2 bolts</p> 	<p>1/2 M</p> <p>1/2 M</p>
<p>b)</p> <p>Ans.</p>		<p>Design suitable fillet welded connection for ISA 80 x 50 x 8mm with it's longed leg connected to gusset plate of thickness 8 mm. The angel is subjected to a factored load of 275 kN. Take Cxx = 27.3 mm. Assume welding is applied to two edged and shop welding. Gy 250 MPa. Fu = 410 MPa.</p> <p>STEP 1) Given Data:</p> <ul style="list-style-type: none"> i) ISA 80 x 50 x 8 mm connected with its longer leg ii) Gusset plate thickness t = 8 mm <p>Therefore t = 8 mm</p> <p>(Thickness will be minimum of angle (8 mm) and gusset plate (8 mm),</p> <ul style="list-style-type: none"> iii) $P_u = 275 \text{ kN} = 275 \times 10^3 \text{ N}$ iv) $C_{xx} = 27.3 \text{ mm}$ v) Welding is applied on two side vi) Shop welding vii) $G_y = 250 \text{ MPa}$ viii) $F_u = 410 \text{ MPa}$ <p>STEP 2) Calculate throat thickness (t_t)</p> $t_t = 0.7 * S$ <p>Decide size of weld (S)</p> <ul style="list-style-type: none"> i) $S_{\min} = 3 \text{ mm}$ (As t < 10 mm) ii) $S_{\max} = 0.75 \times t = 0.75 \times 8 = 6 \text{ mm}$ -----for Round edge plate <p>Therefore; say S = 6 mm</p> <p>Now,</p> $t_t = 0.7 * S$ $t_t = 0.7 * 6$ $t_t = \mathbf{4.2 \text{ mm}}$	<p>6 M</p> <p>1/2 M</p> <p>1/2 M</p> <p>1/2 M</p>

STEP 3) Calculate design strength of fillet weld (f_{dw})

$$f_{dw} = \frac{f_{nw}}{\gamma_{mw}}$$

$$f_{nw} = \frac{f_u}{\sqrt{3}}$$

$$f_{nw} = \frac{410}{\sqrt{3}}$$

$$f_{nw} = 236.71 \text{ N / mm}^2$$

$$f_{dw} = \frac{236.71}{1.25}$$

..... $\gamma_{mw} = 1.25$ for shop welding

$$f_{dw} = 189.37 \text{ N / mm}^2$$

1/2 M

STEP 4) Calculate strength of fillet weld per mm:

$$P_{dw} = f_{dw} \times t$$

$$P_{dw} = 189.37 \times 4.2$$

$$P_{dw} = 795.354 \text{ N/mm}$$

1/2 M

STEP 4) Calculate length of weld required (L_w):

$$\text{Length of weld required, } L_w = \frac{\text{Design load}}{\text{Strength of weld per mm}}$$

$$L_w = \frac{P_u}{P_{dw}}$$

$$L_w = \frac{275 \times 10^3}{795.354}$$

$$L_w = 345.76 \text{ mm}$$

1/2 M

As weld is applied to two edges,

1/2 M

From the sketch; $L_1 + L_2 = 345.76 \text{ mm}$ Eq. No. (1)

	<p>And</p> $(L_1 \times P_{dw}) \times 52.7 = (L_2 \times P_{dw}) \times 27.3$ <p>Rearranging the terms;</p> $52.7 L_1 - 27.3 L_2 = 0 \quad \dots\dots\dots \text{Eq. No. (2)}$ <p>Solving equation No. (1) & (2)</p> $L_1 = 117.99 \text{ mm}$ $L_1 \cong 118 \text{ mm}$ $L_2 = 227.769 \text{ mm}$ $L_2 \cong 228 \text{ mm}$	<p align="center">1 M</p> <p align="center">1/2 M</p> <p align="center">1/2 M</p>
<p align="center">c)</p> <p align="center">Ans.</p>	<p>Draw stress-strain diagram for singly reinforced beam. Show all design parameters by mentioning meaning of notations used in it.</p> <div style="display: flex; justify-content: space-around;"> <div style="text-align: center;"> <p style="text-align: center;">Strain Diagram</p> </div> <div style="text-align: center;"> <p style="text-align: center;">Strain Diagram</p> </div> <div style="text-align: center;"> <p style="text-align: center;">Stress Diagram</p> </div> </div> <p> b = breadth of beam d = effective depth of beam NA = neutral axis xu = neutral axis depth εc = maximum compressive strain in concrete in axial compression εcu = maximum strain in concrete fck = Characteristic strength of concrete Ast = Area of steel in tension Z = lever arm </p>	<p align="center">6 M</p> <p align="center">4M For dia.</p> <p align="center">2 M for meaning the term</p>
<p align="center">Q.4</p>	<p align="center">Attempt any TWO of the following:</p>	<p align="center">12 M</p>
<p align="center">a)</p> <p align="center">Ans.</p>	<p>Find limiting moment of resistance and steel required for a beam 300x 550 mm effective, if concrete M20 and steel Fe 415 is used.</p> <p> Given, b = 300 mm, d=550mm A=bx d =300x550 =16500 mm². F_{ck} =20 N/mm² </p>	<p align="center">6 M</p>

Bars = $1000 \times 50.27 / 180 = 279.3 \text{ mm}$ Provide 8 mm dia. @ 275 mm c/c.</p> 	<p>1/2 M</p> <p>1/2 M</p> <p>1/2 M</p> <p>1/2M</p> <p>1/2M</p> <p>1/2 M</p>
<p>b</p> <p>Ans.</p>	<p>Design a suitable slab for an internal room size of 4 x 7 m. Take a live load 2 kN/m² & Floor finish load 1.0 kN/m². Assume width of support = 230 mm. Take M.F. = 1.4, $\alpha_x = 0.100$ and $\alpha_y = 0.056$. Use M20 concrete & Fe415 steel. Do not apply check for shear and bond. Sketch the cross section along shorter span.</p> <p>Shorter span = 4.00 m, Longer span = 7.00 m, L.L. = 2 kN/m², F.F. = 1 kN/m², M-20, Fe-415, M.F. = 1.3, $\alpha_x = 0.100$, $\alpha_y = 0.056$.</p> <p>Aspect ratio = Longer span / Shorter span = $7.00 / 4.00 = 1.75 < 2.0$ Hence Two way slab. Depth of slab required = shorter span / (M.F. x 20) = $4000 / (1.4 \times 20)$ d = 142.85 mm.</p> <p>Assuming cover 25 mm, (Note: Students may assume different cover) $D = 142.85 + 25 = 167.85 \text{ mm}$.</p> <p>Assume overall depth (D) = 175 mm and Effective depth (d) = 150 mm. Effective span: 1) Clear span + d = $4.0 + 0.175 = 4.175 \text{ m}$.</p>	<p>6M</p> <p>1/2 M</p> <p>1/2 M</p> <p>1/2 M</p>

2) Clear Span + width of Support = $4 + 0.23 = 4.23$ m Hence $l_e = 4.175$ m.

Loading:

- 1) Live load = 2.0 kN/m^2
- 2) Floor finish = 1.0 kN/m^2
- 3) Self-weight = $0.175 \times 25 = 4.375 \text{ kN/m}^2$

Total = 7.375 kN/m^2

factored load = $1.5 \times 7.375 = 11.06 \text{ kN/m}^2$

Ultimate bending moment calculations:

$M_{ux} = \alpha_x \times w_u \times l_e x^2$

= $0.100 \times 11.06 \times 4.175^2 = 19.28 \text{ kN-m}$

$M_{uy} = \alpha_y \times w_u \times l_e y^2$

= $0.056 \times 11.06 \times 4.175^2 = 10.80 \text{ kN-m}$.

Depth required for strength = $\sqrt{\frac{M_u}{0.138 \times f_{ck} \times b}}$

Depth required for strength = $\sqrt{\frac{19.28 \times 10^6}{0.138 \times 20 \times 1000}}$

$d_{req.} = 83.58 \text{ mm} < \text{assumed hence O.K.}$

Provide $D = 175 \text{ mm}$

$d_x = 150 \text{ mm}$. and $d_y = 150 - 10 = 140 \text{ mm}$ (assuming bar dia. 10 mm)

$A_{stx} = \frac{0.5 f_{ck}}{f_y} \left[1 - \sqrt{1 - \frac{4.6 M_d}{f_{ck} b d_x^2}} \right] b d$

$A_{stx} = \frac{0.5 \times 20}{415} \left[1 - \sqrt{1 - \frac{4.6 \times 19.28 \times 10^6}{20 \times 1000 \times 150^2}} \right] 150 \times 1000$

$A_{st} = 375.70 \text{ mm}^2$

Providing 8 mm dia. Bars Area of one bar $A_1 = \pi \times \phi^2 / 4 = \pi \times 8^2 / 4 = 50.27 \text{ mm}^2$

(Note: Students may assume different bar dia.)

Spacing = $1000 \times A_1 / A_{st}$

= $1000 \times 50.27 / 375.70 = 133.80 \text{ mm}$.

Provide 8 mm dia. @ 130 mm c/c along shorter span.

$A_{sty} = \frac{0.5 f_{ck}}{f_y} \left[1 - \sqrt{1 - \frac{4.6 M_d}{f_{ck} b d_y^2}} \right] b d$

$A_{sty} = \frac{0.5 \times 20}{415} \left[1 - \sqrt{1 - \frac{4.6 \times 19.28 \times 10^6}{20 \times 1000 \times 140^2}} \right] 140 \times 1000$

$A_{st} = 221 \text{ mm}^2$

Minimum $A_{st} = 0.12 \times 1000 \times 175 / 100 = 210 \text{ mm}^2$. $A_{st} > \text{Min. } A_{st}$, Hence Ok.

Providing 8 mm dia. Bars Area of one bar $A_1 = \pi \times \phi^2 / 4 = \pi \times 8^2 / 4 = 50.27 \text{ mm}^2$
